PROFESSIONAL SUMMARY

Backend engineer with 2+ years building distributed systems, event-driven alerting platforms, and internal developer tooling at scale across AWS, Go, Kafka, gRPC, GraphQL, and Kubernetes. Track record of measurable latency reductions, automation platforms that eliminated 65% of manual engineering effort, and services operating at 99.9% uptime. Focused on infrastructure that makes other engineers faster.

CORE COMPETENCIES

AWS & Terraform

Go & Distributed Systems

Event-Driven Architecture (Kafka)

gRPC / GraphQL / REST APIs

Kubernetes & Helm

React / TypeScript

CI/CD & Observability (Datadog)

AI Tooling (LangGraph / OpenAI API)

WORK EXPERIENCE

Auvik Networks

Sept 2025 - Present

Software Developer

Canada, Remote

- Design and build Auvik's event-driven alerting platform in Go, covering alert generation, triggering, notification delivery, dismissal, clearing, and read-model updates across distributed services.
- Led Notification V2 - a Kafka-backed, collection-based state management layer for alert lifecycle processing - replacing ad hoc Core Events handling with an auditable, event-driven architecture while preserving backward compatibility for existing consumers.
- Own Alert Insights, turning raw alert data into severity analysis, resolution metrics, baselines, and trend reporting used by managed service providers to prioritize operational response.
- Reduced read latency by 35% under peak load by architecting a CQRS pattern over gRPC and Go, decoupling read and write concerns across a multi-tenant microservice.
- Cut API response time by 40% by migrating a legacy REST API to a GraphQL platform using Apollo Server and TypeScript, applying schema stitching to unify 3+ microservices behind a single contract.
- Prototyped internal AI tooling - a Slack-integrated agent built with Python, FastAPI, LangGraph, and the OpenAI API over vector search - to cut manual Slack searching for engineering teams.

Auticon Canada

April 2025 - October 2025

Full-Stack Developer

Remote

- Provisioned and managed cloud infrastructure using Terraform and AWS, implementing proper error handling, retry logic, and security rules across scalable backend services.
- Owned end-to-end delivery of a greenfield location assessment service - from design to production at 99.9% uptime - by architecting TypeScript APIs on Firebase Cloud Functions with RxJS real-time sync, cutting data-fetch latency by 40% through Firestore query optimization and multi-layer caching.
- Achieved smooth 60fps rendering with 1,000+ concurrent map markers while reducing mobile memory usage by 35% by designing viewport culling algorithms and requestAnimationFrame-based marker scaling.
- Reduced new engineer onboarding from 2 weeks to 3 days by building a structured internal developer documentation system covering full-stack architecture.

Google Developer Student Clubs - McMaster University

September 2024 - April 2025

Backend Developer

Hamilton, ON

- Eliminated integration blockers for 3+ frontend teams by designing and shipping versioned Node.js REST APIs with explicit contract documentation, enabling parallel development across a cross-functional squad.
- Deployed Node.js microservices with Docker in Kubernetes environments, optimizing configuration for cost and performance.

General Motors

September 2023 - September 2024

Software Test Specialist (Co-op)

Toronto, ON

- Accelerated product releases by 25% by building a company-wide internal developer tooling platform that automated end-to-end test workflows, eliminating 65% of manual QA effort.
- Improved software reliability by 40% and enabled seamless CI/CD integration by designing and implementing an end-to-end UI test automation system.
- Expanded Android test coverage to 95%+ of critical user flows by authoring Robot Framework (Python) and Appium end-to-end suites.

EDUCATION

Bachelor of Technology in Software Engineering - McMaster University

2023 - 2025

GPA 3.8/4.0

Advanced Diploma in Computer Engineering - Humber College

2018 - 2021

Dean's Honors List

SKILLS

Languages: Java, Go, Python, SQL, TypeScript/JavaScript **Libraries/Frameworks:** React, Node.js, Next.js, gRPC, Kafka, LangGraph, FastAPI

AI / ML: OpenAI API, LangGraph, RAG pipelines, Pinecone, prompt engineering

Cloud & DevOps: Amazon AWS, Terraform, Docker, Kubernetes (K8s), Helm, GraphQL, Git, JIRA, Firebase, Datadog, K9s, Apache Flink, Redis, PostgreSQL, ClickHouse
